

# Narration

I'm David Batista and I'm an artist here in Miami, not everyone can see the world like I do I can really think outside the box and I really think you'll be impressed. There's hundreds if not thousands of artists, and what makes me special? Well I'm not like any other artist, not every artist at the age of 14 can Design by pencil, Photoshop, and Illustrator easily and efficiently. I make art even some that not everyone understands but no matter what anyone says, there will always be a message in my art, I just need those people willing to look hard enough to really see them, it doesn't take a smart person to figure it out, anyone can do it, it just takes a creative mind. People always ask me what made me an artist, what made me interested in all the mechanics and arts that I do now where did it all start, well it really just started when I was 5 years old and I used to take toys apart and put them back together and make a whole new toy that I would play with. I would take transformer toys and merge them with other things like action figures and Lego. For the time I was just curious how the toys worked and I just wanted to make things and create things of my own. I even had some people think when I was younger that I would be some great engineer or toy maker. They cut it pretty close because now I'm an artist and creator. For the present day there's more than I can probably say I love my art and once I found out I could do it with a computer I was extremely happy and I haven't using that method since stopped since. I have a fascination for art and making new things from scratch or from something else. For my future I plan to go to Scad a Graphics Arts school that I plan to go to in the future and expand my artistic talents and become a better artist. With many influences from my art teacher Brian Reedy and my tech teacher Matthew Pate they have always told me that you can always get better and that no matter what you will always be the best.
